

ETRACS Release Notes

Version 1.0 of ETRACS includes:

- the basic system for creating projects and making requests from Project Development and Divisions
- the process flow for updating requests and adding details for both projects and requests
- the interfaces for pulling project data from STaRS and updating STaRS milestones.
- the definition of users by role, including supervisors and both internal and external requesters and specialists. This will allow controls for both system security and “personalized” ease-of-use of the system.
- the dashboard to allow each user to sort and search both projects and requests

Groups will be added iteratively as the system is built out. In this rollout version, requests can be made to:

- Archaeology
- Historic Architecture
